

Study of Anxiety In Government And Private Employees (J&K)

Chandra Shekar¹ and Neeta²

ABSTRACT

A 2×2 factorial design consisting of two independent variables has been employed in the present study. The first independent variable i.e. gender has been divided in two category that is male and female. The second independent variable employee has taken from government sector and private sector. The anxiety, in the present context is taken up as dependent variable. Employees are not found significant factor, while the sex is significant in the present study.

Keywords: Anxiety, psychopathology, multivariate analysis.
